SSTS Design

Stillwater School Bus Facility

11530 Hudson Boulevard North,
Lake Elmo, MN 55042

PID # 36.029.21.43.0004

Version 1.1

Kloppner Services & Designs, LLC

MPCA LICENSE # 4043

763.843.4114

CONNECT@KSD-MN.COM

On March 26th, 2020 a site evaluation was conducted at 11530 Hudson Blvd N, Lake Elmo, MN 55042 in Washington County to evaluate a location for a new the Subsurface Sewage Treatment System (SSTS) for the Stillwater School Bus Facility. The PID number for the lot is 36.029.21.43.0004. A Type III SSTS with new sewage tanks and two (2) mounds will be used to treat the wastewater from the offices and bathrooms.

Prior to submitting for permit from the local unit government or county, please review and sign all pages which require a signature.

Stillwater School Bus Facility

The Stillwater School Bus Facility is primarily used to store and maintain the buses for Stillwater School District – ISD 834. The facility has a main building with offices for staff and stalls maintenance. The building has bathrooms, breakrooms and utility sinks which are all connected to the sewer line exiting the Southwest corner of the building. No drains from the bus stalls, or other drains in the building, are connected to the sewer.

Estimated Wastewater Source

The staff consists of 12 full-time employees working 8-hour shifts five days a week. The 12 full-time employees are combination of office staff and mechanics. There are 200 bus drivers which have access to bathrooms and a breakroom at the North-end of the building. The bus drivers are only onsite to pick-up and drop-off the buses. Additional visitors (~5 per day) are also added to the total potential usage of sewage for this design.

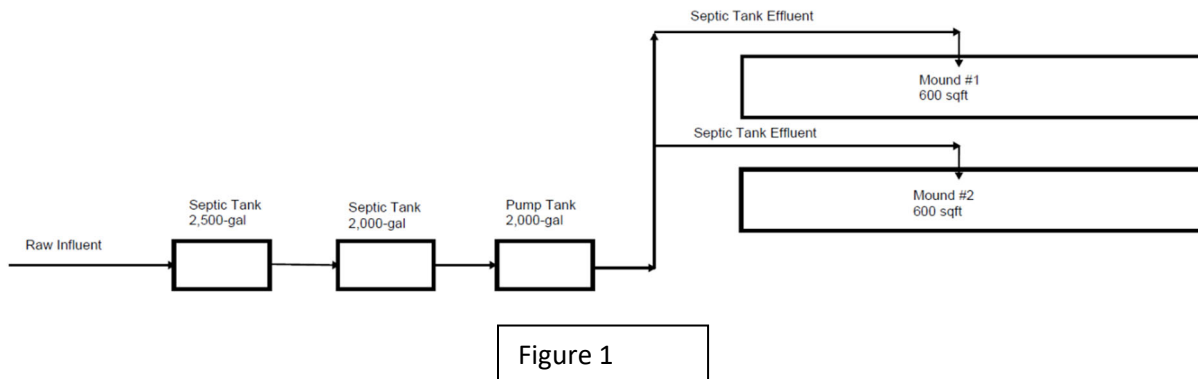

Bus drivers or office staff will not be present during the weekend days. This will provide an opportunity for the system to “catch up,” if the flows exceed expect levels for any unforeseen reason.

VariANCES & Easements

The new SSTS will not require any variances or infringe upon any easements.

SSTS Configuration

The SSTS will use two (2) septic tanks to reduce the raw influent by 44% before dispersal into two (2) zones for final treatment of wastewater. Dual pumps will divide a maximum, timed-dose flow of 1,008 gallons daily into two (2) 600 ft² Mound Absorption Beds (10' x 60'). The pumps will alternate cycles throughout the day to allow for maximum treatment and absorption.

Design Flow

The Design Flow for the system is 1,440-gallons-per-day (GPD). The Average Daily Flow is calculated as 70% of the Daily Flow - 1,008 GPD.

The Design Flow was calculated using the following estimate flow values determined by MN Chapter 7081 for determining flows for Other Establishments.

7081 Specified Type of Establishment	Unit	# of Units	Design Flow per Unit (See Table I)	Total Avg Daily Flow
Office	employee	12	15.00	180
Office	visitor	5	4.00	20
Public lavatory	user	200	5.00	1000
Total Flow 7081 Establishments (gpd)				1200
Safety Factor 20% (gpd)				240
Total Flow				1440

To provide optimal treatment of the sewage through the Soil Absorption Area, the Maximum Daily Flow will be restricted to 1,008 GPD. Weekly flow totals above 1,008 GPD (-gallons) will require a Septic Maintainer to remove the excess from the Pump Tank to avoid overloading the STA and a back-up of the sewage.

Wastewater Strength

The expected raw influent wastewater is classified as Other Establishment: At-Risk. The reason for the At-Risk classification is due to the potential elevated concentrations of Biological Oxygen Demand (BOD), Total Suspended Solids (TSS) and Fats, Oils and Grease (FOG). This classification of the Wastewater will make the SSTS a Type III and may require an operating permit from Washington County.

The estimated waste strengths to determine system loading rates and septic tankage are:

- 400 mg/L BOD (max. 1,000 mg/L)
- 100 mg/L TSS (max. 550 mg/L)
- 20 mg/L FOG

The estimated concentrations for BOD are based on typical BOD mg/L for a "Office (of 200 – 400 mg/L) from Table: "Estimate of Waste Strengths from Other Establishments." See Appendix.

The level of Fats, Oil & Grease will be very low for this facility. The small breakroom does not prepare food or use a lot of grease.

Septic Tankage

The required septic tankage to settle the raw influent for a 3-day retention time to achieve a 44% reduction of the BOD concentration is 4,320 gallons in two tanks. The designed septic tankage is 4,500 gallons in two tanks to help manage Peak Flows and retain a target of 44% reduction of BOD of the raw influent.

The second tank must have an effluent filter (screen) installed at the outlet. The effluent filter must be rated for a daily flow of 1,500 GPD and must reduce the TSS to < 60 mg/L TSS.

No grease tanks will be used due to the low amount of Fats, Oils & Grease entering the system.

The 2,000-gallon tank for the pumps will also serve as a Surge Tank to manage Peak Flows for the Timed-Dose controlled flow. It is recommended that the tank have a large hatch-door for access to the pumps.

Soil Treatment Area & Absorption Area

The expected effluent concentrations after the Primary Septic Tankage is 223 mg/L BOD, 34 mg/L TSS and < 20 mg/L FOG. To properly size the Soil Treatment Area (STA), the BOD concentration was used to calculate the size of the STA using the maximum organic load (1.88 Pounds BOD/sqft/day). The minimum square feet required, for a controlled daily flow of 1,008 GPD, is 1,103 ft². To account for potential hydraulic overload from excessive flow (> 1,008 GPD) or increased organic load above 400 mg/L BOD, the Absorption Area will be a total of 1,200 ft². This is a safety factor of 109%.

The 1,200 ft² Absorption Area will be split into two (2) Zones. Each Zone will be a Type III Mound of 10' x 60' (600 ft²) with 12 inches of washed mound sand. Eight (8) doses of 80 gallons will distribute 1,008 gallons per day to the entire STA. Each dose will alternate between the two zones equally throughout the day.

The reason a Type III system will be required is due a lack of space available throughout the lot for a Type I due to disturbed soil from parking lots, large berms surrounding the property and retention ponds used for stormwater management.

The location of the new Soil Treatment Area is currently under a parking lot and has a 3,000-gallon holding tank in the footprint. To make sure this system will treat the effluent and not create a ponding effect in the soil below the mounds, all disturbed soil, compacted soil and components (tank & piping) must be excavated. The excavated area must be backfilled with only washed mound sand to a depth below the disturbance and in direct contact with Medium Sand naturally occurring in the soil. This will likely be a large of material.

The Manhole used to the connect the sewer line for the North end of the building and the sewer leaving the building, must be abandoned. The manhole may need to be removed to provide enough room for the three new septic tanks.

Management Plan

The ongoing management of the system is required to properly operate this system. The tanks must be pumped at regular intervals based on the sludge and scum levels of all tanks. See Management Plan for more details.

The management of the system must meet all requirements detailed in the permit from Washington County.

Mitigation Plan

If system is unable to meet standards for the Operating Permit for this design, we recommend hiring Kloepfner Services & Design, LLC (KSD) to assess the cause of the compliance issue. KSD will be able to provide a potential cause and help to provide a solution to meet any perimeters not in compliance for the permit.

Construction Notes

Ordinance 206, 6.1 Building Permit requirements

No construction shall be allowed by any local unit of government until the permit required for the subsurface sewage treatment system has been issued.

Ordinance 206, 9.11 Site Protection

Prior to and during construction or lot improvements, the proposed initial and replacement soil treatment and dispersal areas shall be protected from disturbance, compaction, or other damage by use of stakes and silt fence or snow fence.

MR 7080.2100, Subpart 1. F

Electrical installations must comply with applicable laws and ordinances including the most current codes, rules, and regulations of public authorities having jurisdiction and with part 1315.0200, which incorporates the National Electrical Code.

As-Built Drawing

The Licensed Installer must provide an As-Built of the final location of all components. The attached Site Plan is only for reference and should not be considered as final survey or location of system components.

Soil Erosion & Protection from Freezing

Seed and grass must be established throughout the excavated areas to maintain proper protection from soil erosion and freezing. If paved material is used to cover the pipes or tanks, installation should be used to avoid freezing.

Materials & Specifications

11530 Hudson Blvd N, Lake Elmo – Stillwater School Bus Facility

Tankage – Concrete

- 2,500-Gallon W2500-MR (Wieser Concrete)
- 2,0000-Gallon W2000-MR (Wieser Concrete)
 - Install Commercial Effluent Filter
- 2,0000-Gallon W2000-MR (Wieser Concrete) Surge / Pump Tank
 - Hatch for Pumps
 - Duplex Pumps

Commercial Effluent Filter

- Rated for 1,500 GPD
- Must reduce TSS below 60 mg/L
- Service Intervals - 12 months

Duplex Pumps (ea. Pump)

- GPM – 25
- TDH – 16
- Installer Choice of Pump Model

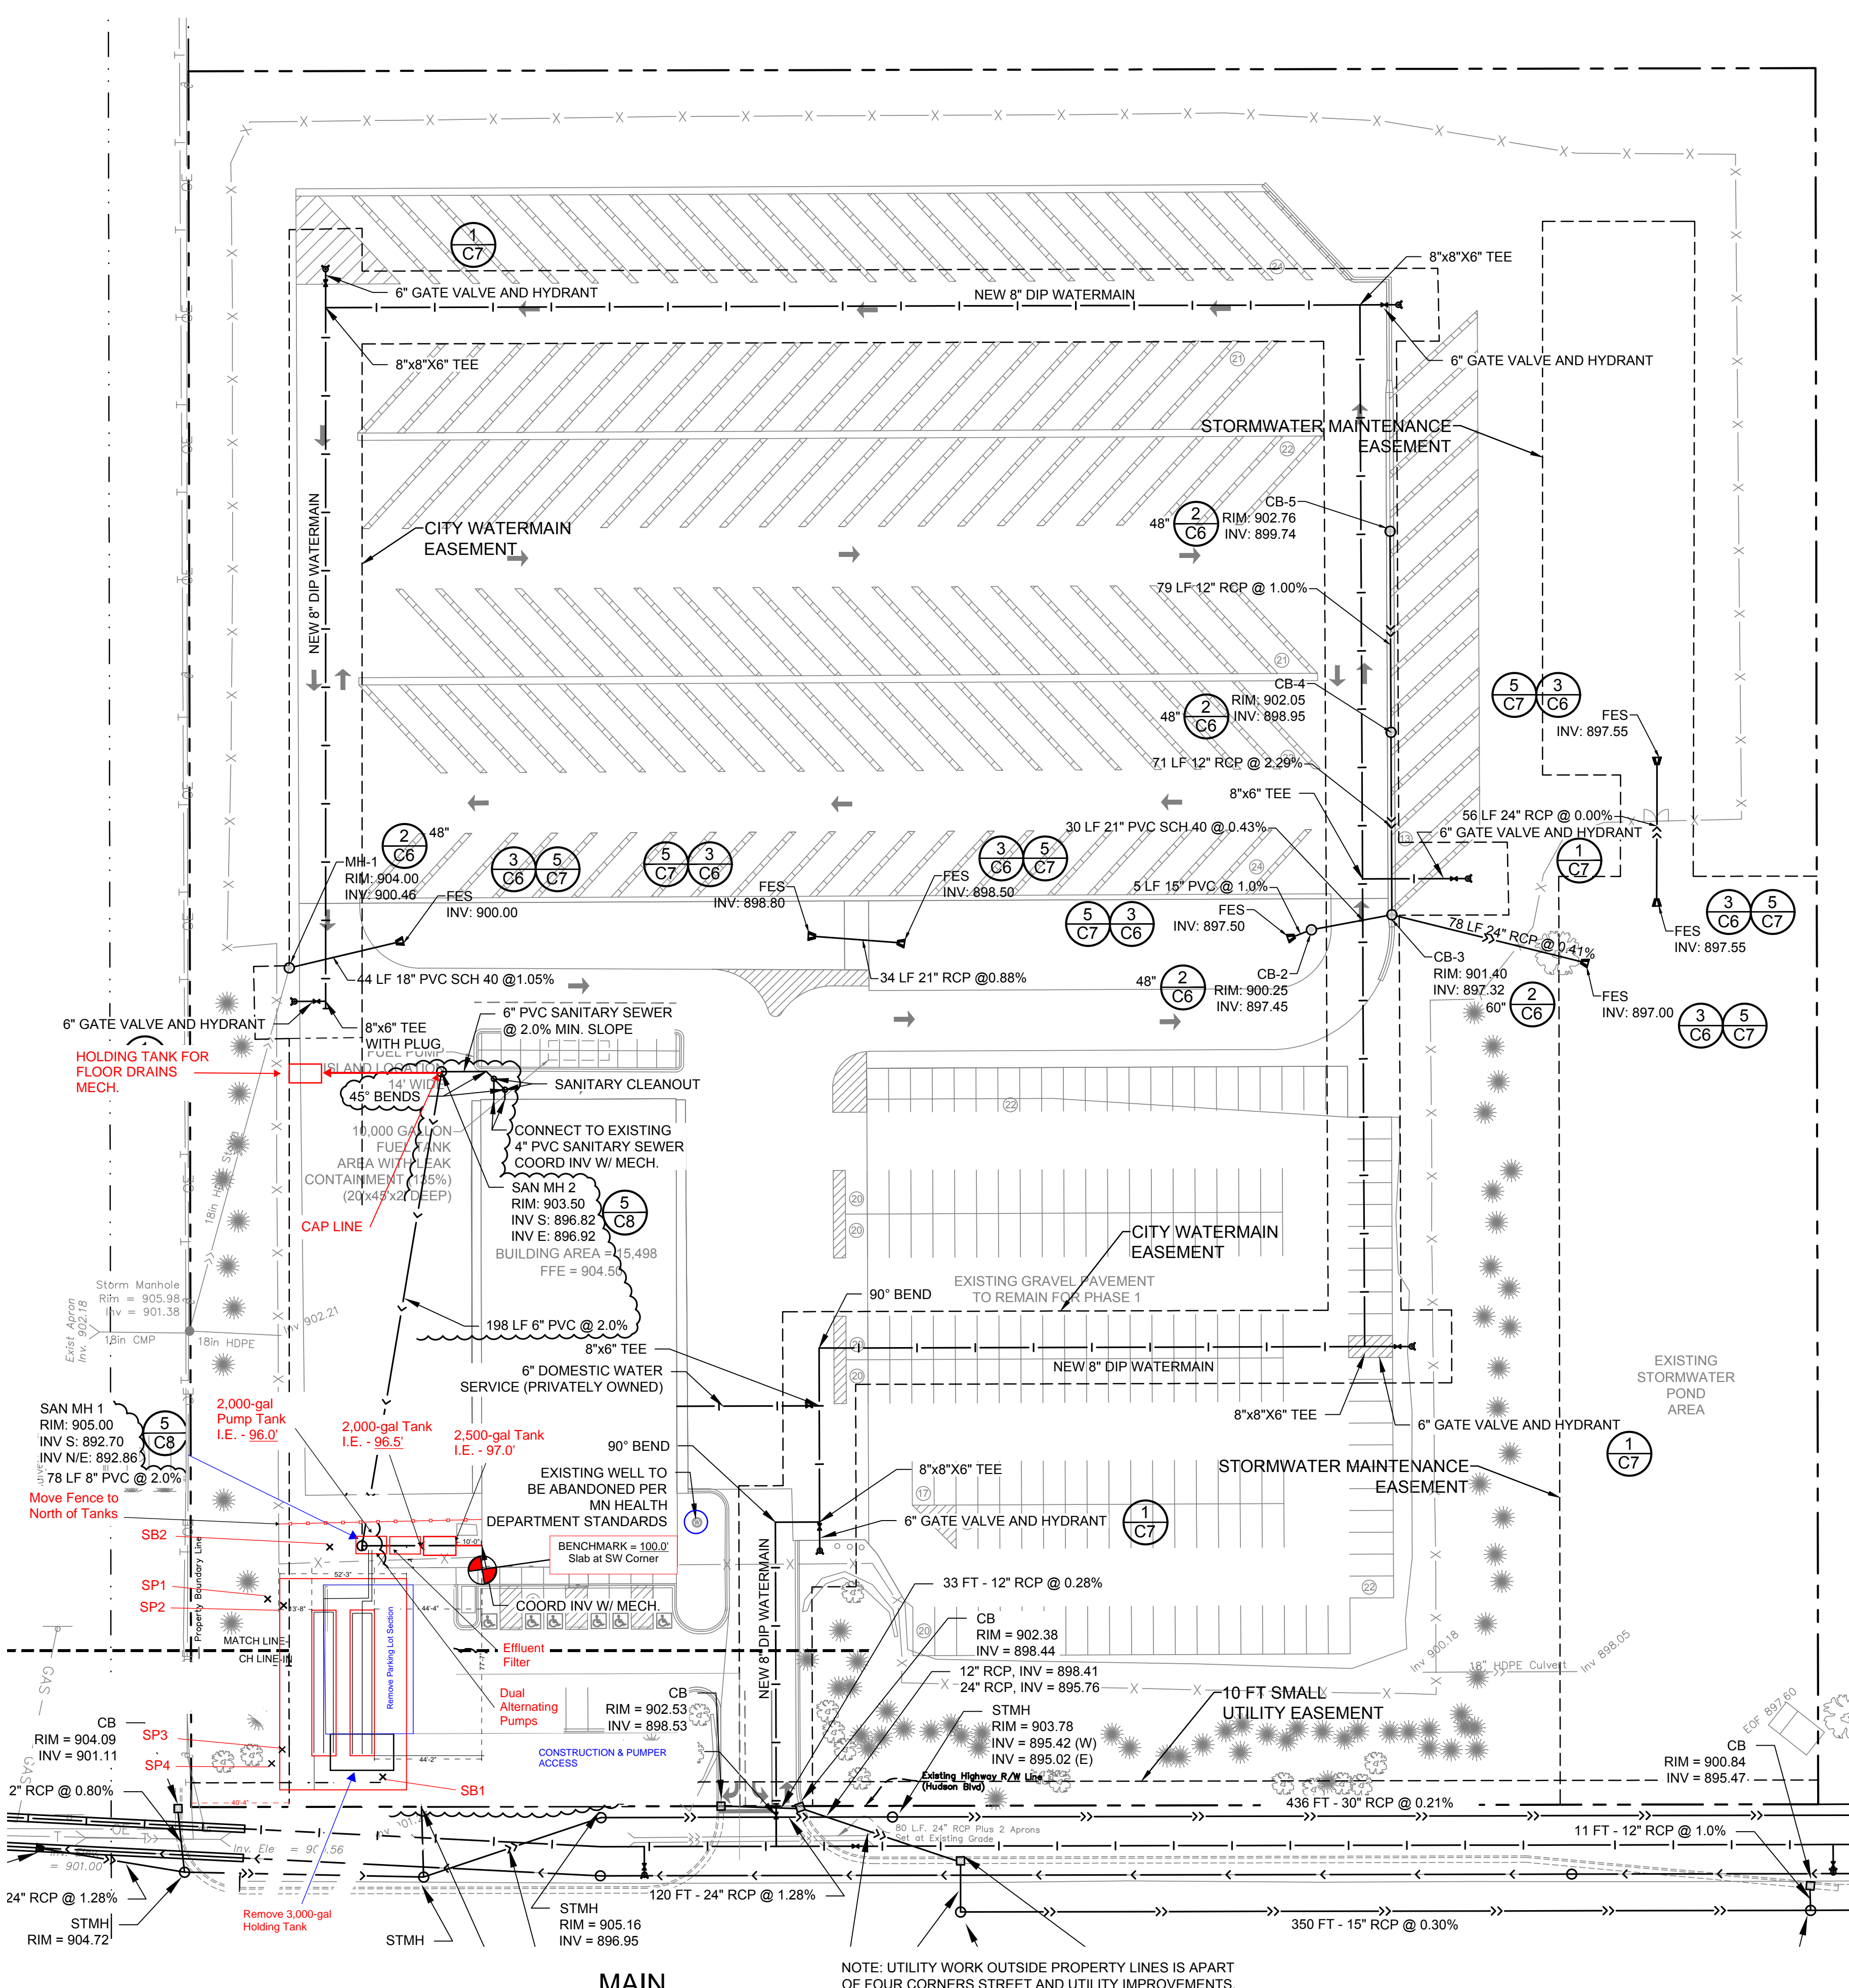

Control Panels & Alarms

- High Level Alarm installed above Effluent Filter
- Timed-Dose Control Panel for Alternating Duplex Pumps
 - High Level Alarm
 - Timer On/Off
 - Event Counter

Dispersal Area – Two Mounds

- Soil Treatment Area – 1,200 sqft
- Zones – 2
- Mound (zone) – 10' x 60'
 - End Feed Manifold
 - Laterals – 3
 - Length of Laterals – 58 feet
 - Rockbed depth – 6 inches + 3" to cover pipe
 - Washed Mound Sand – 12" sand
 - Backfill – 6" mixed soil
 - Topsoil – 6" black dirt
- Washed Sand for Backfill of Disturbed Soils – 10' x 60' x 6'
 - Additional sand for excavated area above Holding Tanks

*Note: All materials for sewer lines, supply lines, rock, backfill material calculations are only estimates of actual amounts which may be used for construction of this design.

UTILITY NOTES

- ALL WATERMAIN AND ACCESSORIES MUST BE CONSTRUCTED IN ACCORDANCE WITH THE CITY OF LAKE ELMO STANDARD SPECIFICATIONS AND DETAILS.
- MANIPULATION OF EXISTING UTILITIES SHALL BE PERFORMED ONLY BY CITY PERSONNEL.
- WATERMAIN SHALL BE DUCTILE IRON PIPE, ENCASED IN POLYETHYLENE, CLASS-52.
- ALL FITTINGS SHALL COMPLY WITH CEAM SPEC. 2611.2.A1. ALL FITTINGS SHALL BE DUCTILE IRON PIPE WITH POLYETHYLENE ENCASEMENT. ALL CONNECTIONS SHALL BE INSTALLED UTILIZING COR-BLUE NUTS & BOLTS.
- USE GATE VALVES FOR ALL APPLICATIONS UP THROUGH 12 INCHES.
- GATE VALVES SHALL BE RESILIENT WEDGE AMERICAN FLOW CONTROL SERIES 2500 OR APPROVED EQUAL. GATE VALVES MUST COMPLY WITH CEAM SPEC 2611.2.C.2.
- USE BUTTERFLY VALVES FOR ALL APPLICATIONS GREATER THAN 12 INCHES.
- BUTTERFLY VALVES SHALL BE MUELLER LINESEAL III OR APPROVED EQUAL. BUTTERFLY VALVES SHALL COMPLY WITH CEAM SPEC. 2611.2.C.3.
- BOLTS AND NUTS ON ALL VALVES AND HYDRANTS SHALL BE STAINLESS STEEL.
- ALL HYDRANTS SHALL BE INSTALLED 5.0 FEET BACK OF CURB.
- HYDRANTS SHALL BE WATEROUS "PACER" MODEL WB-67 OR APPROVED EQUAL, FITTED WITH FH 800 SERIES FLEX STAKE AND PAINTED RED.
- HYDRANTS SHALL HAVE TWO OUTLET NOZZLES FOR 2-1/2 (I.D.) HOSE CONNECTIONS AND ONE 4" STORZ NOZZLE (MODEL WB-67) AND PENTAGON NUT END GATE.
- THE CURB STOP SERVICE ASSEMBLY SHALL HAVE A MINIMUM 1-FT ADJUSTMENT RANGE AND SHALL EXTEND 6 INCHES ABOVE FINISHED GRADE FULLY EXTENDED.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING WATER TO HOMES AND BUSINESSES WHOSE WATER SUPPLY IS INTERRUPTED DURING THE COURSE OF THE PROJECT.

STANDARD PLAN NOTES
WATERMAIN PLANS

MARCH 2017
CITY OF LAKE ELMO
STANDARD DRAWING NO. 200A
LAKE ELMO

For additional utility notes, see sheet C8.

- SEPTIC SYSTEM NOTES:**
- The estimated peak design flow is 1,440 gallons per day.
 - Soil Absorption Area (moat) will be divided into two zones of 10' x 60'.
 - Disturbed soil below the absorption area will be dug out and replaced with washed mound sand.
 - The flow to the mounds will be restricted to 70% of Design Flow. If flow exceeds 1,008 gallons in 24-hours, an Alarm will sound.
 - Dual Alternating Pumps will be used to Time-Open the flow to the mounds.
 - The existing Manhole & 3,000-gallon Septic Tank will be removed.
 - Cap drain from Shop Floor to Manhole. Install new Holding Tank for flow.
- THIS IS ONLY A SITE PLAN
ALL SEPTIC LOCATIONS AND MEASUREMENTS ARE ONLY ESTIMATES
AS-BUILT WILL NEED TO BE PROVIDED BY INSTALLER AFTER CONSTRUCTION

Textures: c-clay sic-silty clay sc-sandy clay cl-clay loam sicl-silty clay loam scl-sandy clay loam si-silt sil-silt loam l-loam sl-sandy loam* ls-loamy sand* s-sand*	Subsoil Indicator(s) of Saturation: S1. Depleted matrix (value ≥ 4 and chroma ≤ 2) S2. Distinct gray or red redox features S3. 5Y chroma ≤ 3 S4. 7.5 YR or redder faint redox concentrations or redox depletion	Consistence: <u>Loose-</u> Intact specimen not available <u>Friable-</u> Slight force between fingers <u>Firm-</u> Moderate force between fingers <u>Extremely firm-</u> Moderate force between hands or slight foot pressure <u>Rigid-</u> Foot pressure
Soil Structure Grade: <u>Massive-</u> No observable aggregates, or no orderly arrangement of natural lines of weakness <u>Weak-</u> Poorly formed, indistinct peds, barely observable in place <u>Moderate-</u> Well formed, distinct peds, moderately durable and evident, but not distinct in undisturbed <u>Strong-</u> Durable peds that are quite evident in un-displaced soil, adhere weakly to one another, withstand displacement, and become separated when soil is disturbed <u>Loose-</u> No peds, sandy soil	If yes to one of the above indicators then: Topsoil Indicator(s) of Saturation: T1. Wetland Vegetation T2. Depressional Landscape T3. Organic texture or organic modifiers T4. N 2.5/ 0 color T5. Redox features in topsoil T6. Hydric Soil	Slope Shape: Slope shape is described in two directions: up and down slope (perpendicular to the contour), and across slope (along the horizontal contour); e.g. Linear, Convex or LV'.
Soil Structure Shape: <u>Granular-</u> The peds are approximately spherical or polyhedral and are commonly found in topsoil. These are the small, rounded peds that hang onto roots <u>Platy-</u> The peds are flat and plate like. They are oriented horizontally and are usually overlapping. Platy structure is commonly found in forested areas <u>Blocky-</u> The peds are block-like or polyhedral, and are bounded by flat or slightly rounded surface that are casting of the faces of surrounding peds. <u>Prismatic-</u> Flat or slightly rounded vertical faces bound the individual peds. Peds are distinctly longer vertically, and faces are typically cast or molds of <u>Single Grain-</u> The structure found in a sandy soil. The individual particles are not held together.	*Sand Modifiers co-coarse m-medium f-fine vf-very fine

9. Additional Info for At-Risk, HSW or Type IV Design

A. Starting BOD Concentration = Design Flow X Starting BOD (mg/L) X 8.35 ÷ 1,000,000

$$\boxed{1008} \text{ gpd} \times \boxed{223} \text{ mg/L} \times 8.35 \div 1,000,000 = \boxed{1.88} \text{ lbs. BOD/day}$$

B. Target BOD Concentration = Design Flow X Target BOD (mg/L) X 8.35 ÷ 1,000,000

$$\boxed{1008} \text{ gpd} \times \boxed{223} \text{ mg/L} \times 8.35 \div 1,000,000 = \boxed{1.88} \text{ lbs. BOD/day}$$

Lbs. BOD To Be Removed:

PreTreatment Technology: *Must Meet or Exceed Target

Disinfection Technology: *Required for Levels A & B

C. Organic Loading to Soil Treatment Area:

$$\boxed{223} \text{ mg/L} \times \boxed{1008} \text{ gpd} \times 8.35 \div 1,000,000 \div \boxed{1200} \text{ ft}^2 = \boxed{0.00156} \text{ lbs./day/ft}^2$$

10. Comments/Special Design Considerations:

- The estimated design flow is calculated for 12 full-time employees; 200 bus drivers and 5 visitors per day.
- Soil Absorption Area (mound) will be divided into two zones of 10' x 60'.
- Disturbed soil below the absorption area will be dugout and replaced with washed mound sand.
- The existing Manhole & 3,000-gallon Septic Tank will be removed.
- The flow to the mounds will be restricted to 70% of Design Flow. If flow exceeds 1,008 gallons in 24-hours, an Alarm will sound.
- Dual Alternating Pumps will be used to Time-Dose the flow to the mounds.
- Cap drain from Shop Floor to Manhole. Install new Holding Tank for flow.

I hereby certify that I have completed this work in accordance with all applicable ordinances, rules and laws.

With water and sewer	400 - 800	0.35/space

Waste Strength Concentration into Soil Treatment Area for Other Establishments

1 DESIGN FLOW & WASTE STRENGTH

Attach data / estimate basis for Other Establishments

Design Flow: GPD

Anticipated Waste Type:

BOD: mg/L TSS: mg/L

2 SEPTIC REMOVAL RATE THROUGH SEPTIC TANKS

A. Typical removal of BOD and TSS in primary sedimentation (septic) tanks is calculated as a function of the detention time and constituent concentration represented in the equalization below:

$$R = \frac{t}{a + bt}$$

R = expected removal efficiency, % *Max. 7 hours
 t = nominal detention time, h
 a, b = empirical constants

Empirical constant at 20 C

Item	a, h	b
BOD	0.018	0.02
TSS	0.0075	0.014

Reference = pg. 303-304 "Small and Decentralized Wastewater Management Systems" - Crites & Tchobanoglous

B. Equation Removal Percentage Equation (BOD): $7 \text{ h} \div (0.018 + (0.02 * 7 \text{ h})) =$ %

C. Equation Removal Percentage Equation (TSS): $7 \text{ h} \div (0.0074 + (0.014 * 7 \text{ h})) =$ %

D. Expected BOD Concentration after min. of 3 days of retention time

Starting BOD Concentration = mg/L Septic Tank Removal percentage: %

Equation: mg/L x % = mg/L

THEN mg/L - mg/L = mg/L

Expected BOD Concentration from Septic Tank Effluent: mg/L BOD

E. Expected TSS Concentration after min. of 3 days of retention time

Starting TSS Concentration = mg/L Septic Tank Removal percentage: %

Equation: mg/L x % = mg/L

THEN mg/L - mg/L = mg/L

Expected TSS Concentration from Septic Effluent: mg/L TSS

Waste Strength Concentration into Soil Treatment Area for Other Establishments

3 MAXIMUM WASTE STRENGTH LOADING RATES - BOTTOM AREA ONLY

Soil Loading Rate (gpd/ft ²)	Pounds of BOD ₅ /ft ² /day	Pounds of TSS/ft ² /day	Pounds of FOG/ft ² /day
1.2	0.0017	0.0006	0.0003
0.78	0.0011	0.0004	0.0002

0.6	0.0009	0.0003	0.0001
0.52	0.0008	0.0003	0.0001
0.5	0.0007	0.0003	0.0001
0.45	0.0006	0.0002	0.0001
0.42	0.0006	0.0002	0.0001

Based on organic loading to a Type I system with design flow and bottom area loading with concentrations of BOD₅ of 170 mg/L, TSS of 60 mg/L, and FOG of 25 mg/L.

A. Maximum Waste Strength Loading Rate based on Soil Loading Rate

Soil Hydraulic Loading Rate (SHLR) : gpd/sqft
 BOD Constant per SLR: Pounds of BOD₅/ft²/day:
 TSS Constant per SLR: Pounds of TSS/ft²/day:

B. Timed-Dose Flow from "Pump Tank Design Worksheet (Time Dose)"

C. "Chosen Maximum Flow to STA": gallons

C. Size of Bottom Area of Absorption Area based on Soil Hydraulic Loading Rate - Level C effluent

Required Square Feet based on SHLR = Time-Dosed Flow X SHLR

gpd ÷ gpd/sqft = ft²

D. Size of Bottom Area of Absorption Area based on BOD to Maximum Waste Strength Loading Rates

BOD Concentration = Time-Dosed Flow X Septic Tank Effluent BOD (mg/L) X 8.35 ÷ 1,000,000

gpd X mg/L X 8.35 ÷ 1,000,000 = lbs. BOD/day

Required Square Feet for removal of lbs. BOD/day = lbs. BOD/day x Maximum Pounds of BOD₅/ft²/day

lbs. BOD/day ÷ Max Pounds of BOD₅/ft²/day: = ft²

E. Size of Bottom Area of Absorption Area based on TSS Maximum Waste Strength Loading Rates

TSS Concentration = Time-Dosed Flow X Septic Tank Effluent TSS (mg/L) X 8.35 ÷ 1,000,000

gpd X mg/L X 8.35 ÷ 1,000,000 = lbs. TSS/day

Required Square Feet for removal of lbs. TSS/day = lbs. TSS/day x Maximum Pounds of TSS/ft²/day

lbs. TSS/day ÷ Max Pounds of TSS/ft²/day: = ft²

Waste Strength Concentration into Soil Treatment Area for Other Establishments

4 DESIGNED SOIL TREATMENT AREA

A. Summary of Minimum Size of Soil Treatment Area (STA) - Bottom Only

SHLR	840	
BOD	1103	ft ²
TSS	472	ft ²
Designer's Choice	1200	ft ² *must be greater than largest Minimum STA

B. Safety Factor for Designer's Choice of Soil Treatment Area - lbs./BOD/day/ft2

Safety Factor for lbs./BOD/ft2 109%

$$\frac{223 \text{ mg/L} \times 1008 \text{ gpd} \times 8.35 \div 1,000,000}{1200 \text{ ft}^2} = 0.00156 \text{ lbs./day/ft}^2$$

Max 0.0017 lbs./day/ft² / Actual 0.00156 lbs./day/ft² = 109% safety percentage

C. Safety Factor for Designer's Choice of Soil Treatment Area - lbs./TSS/day/ft2

Safety Factor for lbs./TSS/ft2 254%

$$\frac{34 \text{ mg/L} \times 1008 \text{ gpd} \times 8.35 \div 1,000,000}{1200 \text{ ft}^2} = 0.00024 \text{ lbs./day/ft}^2$$

Max 0.0006 lbs./day/ft² / Actual 0.00024 lbs./day/ft² = 254% safety percentage

It may be advisable to oversize the absorption area by 50% and divide the system into 3 zones for dosing and resting cycles if secondary treatment is not employed (a must for MSTs - MN Rules Chapter 7081.0270, Subp. 5 B 3).

D. Number of Zones for Soil Treatment Area

Designer Choice of Zones	2	zones
Absorption Area per Zone	600	ft ²

Waste Strength Concentration into Soil Treatment Area for Other Establishments

Waste Strength Concentration into Soil Treatment Area for Other Establishments

4 DESIGNED SOIL TREATMENT AREA

A. Summary of Minimum Size of Soil Treatment Area (STA) - Bottom Only

SHLR	840	
BOD	2344	ft ²
TSS	2360	ft ²
Designer's Choice	2400	ft ² *must be greater than largest Minimum STA

B. Safety Factor for Designer's Choice of Soil Treatment Area - lbs./BOD/day/ft²

Safety Factor for lbs./BOD/ft² 102%

$$\frac{473 \text{ mg/L} \times 1008 \text{ gpd} \times 8.35 \div 1,000,000}{2400 \text{ ft}^2} = 0.00166 \text{ lbs./day/ft}^2$$

Max 0.0017 lbs./day/ft² / Actual 0.00166 lbs./day/ft² = 102% safety percentage

C. Safety Factor for Designer's Choice of Soil Treatment Area - lbs./TSS/day/ft²

Safety Factor for lbs./TSS/ft² 102%

$$\frac{168 \text{ mg/L} \times 1008 \text{ gpd} \times 8.35 \div 1,000,000}{2400 \text{ ft}^2} = 0.00059 \text{ lbs./day/ft}^2$$

Max 0.0006 lbs./day/ft² / Actual 0.00059 lbs./day/ft² = 102% safety percentage

It may be advisable to oversize the absorption area by 50% and divide the system into 3 zones for dosing and resting cycles if secondary treatment is not employed (a must for MSTs - MN Rules Chapter 7081.0270, Subp. 5 B 3).

D. Number of Zones for Soil Treatment Area

Designer Choice of Zones 2 zones

Absorption Area per Zone 1200 ft²

Mound Design Worksheet

<1% Slope

1. **SYSTEM SIZING:** Project ID: _____ v 04.02.2019

- A. Design Flow : GPD
- B. Soil Loading Rate: GPD/ft²
- C. Depth to Limiting Condition: ft
- D. Percent Land Slope: %
- E. Design Media Loading Rate: GPD/ft²
- F. Mound Absorption Ratio:

TABLE IXa				
LOADING RATES FOR DETERMINING BOTTOM ABSORPTION AREA AND ABSORPTION RATIOS USING PERCOLATION TESTS				
Percolation Rate (MPI)	Treatment Level C		Treatment Level A, A-2, B,	
	Absorption Area Loading Rate (gpd/ft ²)	Mound Absorption Ratio	Absorption Area Loading Rate (gpd/ft ²)	Mound Absorption Ratio
<0.1	-	1	-	1
0.1 to 5	1.2	1	1.6	1
0.1 to 5 (fine sand and loamy fine sand)	0.6	2	1	1.6
6 to 15	0.78	1.5	1	1.6
16 to 30	0.6	2	0.78	2
31 to 45	0.5	2.4	0.78	2
46 to 60	0.45	2.6	0.6	2.6
61 to 120	-	5	0.3	5.3
>120	-	-	-	-

Table I				
MOUND CONTOUR LOADING RATES:				
Measured Perc Rate	← OR →	Texture - derived mound absorption ratio		Contour Loading Rate:
≤ 60mpi		1.0, 1.3, 2.0, 2.4, 2.6	→	≤12
61-120 mpi	← OR →	5.0	→	≤12
≥ 120 mpi*		>5.0*	→	≤6*

*Systems with these values are not Type I systems. Contour Loading Rate (linear loading rate) is a recommended value.

2. DISPERSAL MEDIA SIZING

A. Calculate Dispersal Bed Area: Design Flow (1.A) ÷ Design Media Loading Rate (1.E) = ft²

$$\frac{1440 \text{ GPD}}{1.2 \text{ GPD/ft}^2} = 1200 \text{ ft}^2$$

If a larger dispersal media area is desired, enter size: ft²

B. Enter Dispersal Bed Width: ft *Can not exceed 10 feet.*

C. Calculate Contour Loading Rate: Bed Width (2.B) X Design Media Loading Rate (1.E)

$$10 \text{ ft} \times 1.2 \text{ GPD/ft}^2 = 12.0 \text{ gal/ft} \quad \text{Can not exceed Table 1}$$

D. Calculate Minimum Dispersal Bed Length: Dispersal Bed Area (2.A) ÷ Bed Width (2.B) = Bed Length

$$\frac{1200 \text{ ft}^2}{10 \text{ ft}} = 120.0 \text{ ft}$$

3. ABSORPTION AREA SIZING

A. Calculate Absorption Width: Bed Width (2.B) X Mound Absorption Ratio (1.F) = Absorption Width

$$10.0 \text{ ft} \times 1.0 = 10.0 \text{ ft}$$

B. For slopes from 0 to 1%, the Absorption Width is measured from the bed equally in both directions.

Absorption Width Beyond the Bed: Absorption Width (3.A) - Bed Width (2.B) ÷ 2 = Width beyond Bed

$$\left(\frac{10.0 \text{ ft} - 10.0 \text{ ft}}{2} \right) = 0.0 \text{ ft}$$

4. DISTRIBUTION MEDIA: ROCK

Project ID:

A. Rock Depth Below Distribution Pipe

in ft

5. DISTRIBUTION MEDIA: REGISTERED TREATMENT PRODUCTS: CHAMBERS AND EZFLOW**A. Enter Dispersal Media:**

B. Enter the Component: Length: ft **Width:** ft **Depth:** ft**C. Number of Components per Row = Bed Length divided by Component Length (Round up)**

ft ÷ ft = components/row

Check registered product information for specific application and design

D. Actual Bed Length = Number of Components/row X Component Length:

components X ft =

E. Number of Rows = Bed Width divided by Component Width

ft ÷ ft = rows *Adjust width so this is a whole number.*

F. Total Number of Components = Number of Components per Row X Number of Rows

X = components

6. MOUND SIZING**A. Calculate Clean Sand Lift: 3 feet minus Depth to Limiting Condition = Clean Sand Lift (1 ft minimum)**

3.0 ft - ft = ft Design Sand Lift (optional): ft

B. Upslope Mound Height = Clean Sand Lift + Depth of Media + Depth of Cover (1 ft)

ft + ft + ft = ft

C. Berm Width = Upslope Mound Height (4.B) X 4 (4 is recommended, but could be 3-12)

ft X ft = ft

D. Total Landscape Width = Berm Width + Dispersal Bed Width + Berm Width

ft + ft + ft = ft

E. Additional Berm Width necessary for absorption - Absorption Width - Total Landscape Width

ft - ft = ft if number is negative (<0), value is **ZERO**

F. Final Berm Width = Additional Berm Width + Berm Width

ft + ft = ft

G. Total Mound Width = Final Berm Width + Dispersal Bed Width + Final Berm Width

ft + ft + ft = ft

H. Total Mound Length = Final Berm Width + Dispersal Bed Length + Final Berm Width

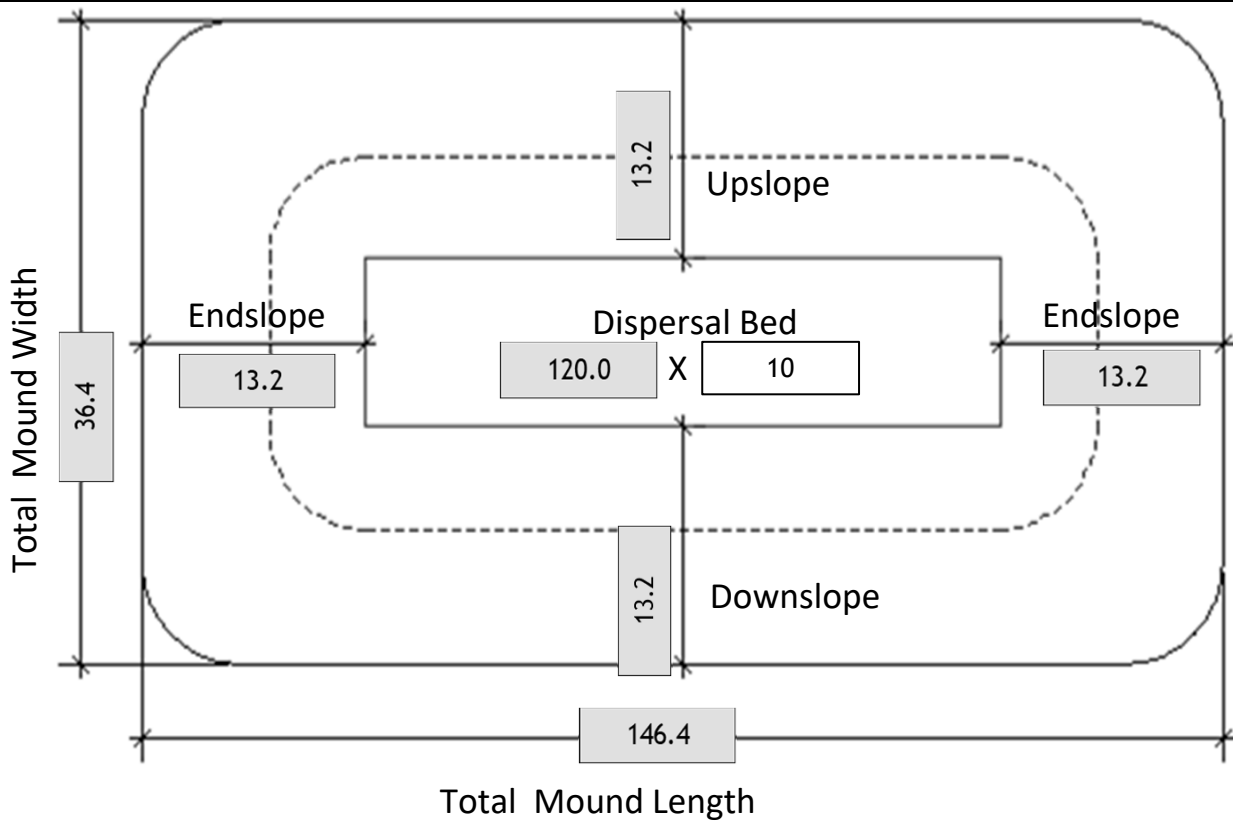

ft + ft + ft = ft

I. Setbacks from the Bed: Absorption Width - Dispersal Bed Width divided by 2

(ft -) / 2 = ft

7. MOUND DIMENSIONS

Project ID:

Comments:

Absorption Area will be divided into two zones of 10' x 60'. Mound slope ratio: 4:1. Disturbed soil below the mound will be dugout and replaced with washed mound sand.

Project ID: _____ v 04.02.2019

A. Rock Volume : (Rock Below Pipe + Rock to cover pipe (pipe outside dia + ~2 inch)) X Bed Length X Bed Width = Volume

$$\left(\boxed{6} \text{ in} + \boxed{3.5} \text{ in} \right) \div 12 \times \boxed{120.0} \text{ ft} \times \boxed{10.0} \text{ ft} = \boxed{950.0} \text{ ft}^3$$

Divide ft³ by 27 ft³/yd³ to calculate cubic yards: $\boxed{950.0} \text{ ft}^3 \div 27 = \boxed{35.2} \text{ yd}^3$

Add 30% for constructability: $\boxed{35.2} \text{ yd}^3 \times 1.3 = \boxed{45.7} \text{ yd}^3$

B. Calculate Clean Sand Volume:

Volume Under Rock bed : Average Sand Depth x Media Width x Media Length = cubic feet

$$\boxed{1.0} \text{ ft} \times \boxed{10.0} \text{ ft} \times \boxed{120.0} \text{ ft} = \boxed{1200.0} \text{ ft}^3$$

For a Mound on a slope from 0-1%

Volume from Length = ((Upslope Mound Height - 1) X Absorption Width Beyond Bed X Media Bed Length)

$$\boxed{3.30} \text{ ft} - 1) \times \boxed{} \times \boxed{120} \text{ ft} = \boxed{6.00}$$

Volume from Width = ((Upslope Mound Height - 1) X Absorption Width Beyond Bed X Media Bed Width)

$$\boxed{3.30} \text{ ft} - 1) \times \boxed{} \times \boxed{10} \text{ ft} = \boxed{6.00}$$

Total Clean Sand Volume : Volume from Length + Volume from Width + Volume Under Media

$$\boxed{6.0} \text{ ft}^3 + \boxed{6.0} \text{ ft}^3 + \boxed{1200} \text{ ft}^3 = \boxed{1212.0} \text{ ft}^3$$

For a Mound on a slope greater than 1%

Upslope Volume : ((Upslope Mound Height - 1) x 3 x Bed Length) ÷ 2 = cubic feet

$$\left((\boxed{} \text{ ft} - 1) \times 3.0 \text{ ft} \times \boxed{} \right) \div 2 = \boxed{} \text{ ft}^3$$

Downslope Volume : ((Downslope Height - 1) x Downslope Absorption Width x Media Length) ÷ 2 = cubic feet

$$\left((\boxed{} \text{ ft} - 1) \times \boxed{} \text{ ft} \times \boxed{} \right) \div 2 = \boxed{} \text{ ft}^3$$

Endslope Volume : (Downslope Mound Height - 1) x 3 x Media Width = cubic feet

$$\left(\boxed{} \text{ ft} - 1 \right) \times 3.0 \text{ ft} \times \boxed{} \text{ ft} = \boxed{} \text{ ft}^3$$

Total Clean Sand Volume : Upslope Volume + Downslope Volume + Endslope Volume + Volume Under Media

$$\boxed{} \text{ ft}^3 + \boxed{} \text{ ft}^3 + \boxed{} \text{ ft}^3 + \boxed{} \text{ ft}^3 = \boxed{} \text{ ft}^3$$

Divide ft³ by 27 ft³/yd³ to calculate cubic yards: $\boxed{1212.0} \text{ ft}^3 \div 27 = \boxed{44.9} \text{ yd}^3$

Add 30% for constructability: $\boxed{44.9} \text{ yd}^3 \times 1.3 = \boxed{58.4} \text{ yd}^3$

C. Calculate Sandy Berm Volume:

Total Berm Volume (approx) : ((Avg. Mound Height - 0.5 ft topsoil) x Mound Width x Mound Length) ÷ 2

$$\left(\boxed{3.3} - 0.5 \right) \text{ ft} \times \boxed{36.4} \text{ ft} \times \boxed{146.4} \div 2 = \boxed{7460.5} \text{ ft}^3$$

Total Mound Volume - Clean Sand volume - Rock Volume = cubic feet

$$\boxed{7460.5} \text{ ft}^3 - \boxed{1212.0} \text{ ft}^3 - \boxed{950.0} \text{ ft}^3 = \boxed{5298.5} \text{ ft}^3$$

Divide ft³ by 27 ft³/yd³ to calculate cubic yards: $\boxed{5298.5} \text{ ft}^3 \div 27 = \boxed{196.2} \text{ yd}^3$

Add 30% for constructability: $\boxed{196.2} \text{ yd}^3 \times 1.2 = \boxed{255.1} \text{ yd}^3$

D. Calculate Topsoil Material Volume: Total Mound Width X Total Mound Length X .5 ft

$$\boxed{36.4} \text{ ft} \times \boxed{146.4} \text{ ft} \times 0.5 \text{ ft} = \boxed{2664.5} \text{ ft}^3$$

Divide ft³ by 27 ft³/yd³ to calculate cubic yards: $\boxed{2664.5} \text{ ft}^3 \div 27 = \boxed{98.7} \text{ yd}^3$

Add 30% for constructability: $\boxed{98.7} \text{ yd}^3 \times 1.3 = \boxed{75.9} \text{ yd}^3$

Project ID:

v 04.02.2019

1. Media Bed Width: ft
2. Minimum Number of Laterals in system/zone = Rounded up number of $[(\text{Media Bed Width} - 4) \div 3] + 1$.
 $[(\text{ } - 4) \div 3] + 1 = \text{ } \text{ laterals}$ *Does not apply to at-grades*
3. Designer Selected Number of Laterals: laterals
Cannot be less than line 2 (Except in at-grades)
4. Select Perforation Spacing: ft
5. Select Perforation Diameter Size: in
6. Length of Laterals = Media Bed Length - 2 Feet.

- 2ft = ft *Perforation can not be closer than 1 foot from edge.*

7. Determine the Number of Perforation Spaces. Divide the Length of Laterals by the Perforation Spacing and round down to the nearest whole number.
Number of Perforation Spaces = ft \div ft = Spaces
8. Number of Perforations per Lateral is equal to 1.0 plus the Number of Perforation Spaces. Check table below to verify the number of perforations per lateral guarantees less than a 10% discharge variation. The value is double with a center manifold.

Perforations Per Lateral = Spaces + 1 = Perfs. Per Lateral

Maximum Number of Perforations Per Lateral to Guarantee <10% Discharge Variation											
1/4 Inch Perforations						7/32 Inch Perforations					
Perforation Spacing (Feet)	Pipe Diameter (Inches)					Perforation Spacing (Feet)	Pipe Diameter (Inches)				
	1	1 1/4	1 1/2	2	3		1	1 1/4	1 1/2	2	3
2	10	13	18	30	60	2	11	16	21	34	68
2 1/2	8	12	16	28	54	2 1/2	10	14	20	32	64
3	8	12	16	25	52	3	9	14	19	30	60
3/16 Inch Perforations						1/8 Inch Perforations					
Perforation Spacing (Feet)	Pipe Diameter (Inches)					Perforation Spacing (Feet)	Pipe Diameter (Inches)				
	1	1 1/4	1 1/2	2	3		1	1 1/4	1 1/2	2	3
2	12	18	26	46	87	2	21	33	44	74	149
2 1/2	12	17	24	40	80	2 1/2	20	30	41	69	135
3	12	16	22	37	75	3	20	29	38	64	128

9. Total Number of Perforations equals the Number of Perforations per Lateral multiplied by the Number of Perforated Laterals.

Perf. Per Lat. X Number of Perf. Lat. = Total Number of Perf.

10. Spacing of laterals; Must be greater than 1 foot and no more than 3 feet: ft

10. Select Type of Manifold Connection (End or Center):

11. Select Lateral Diameter (See Table): in

12. Calculate the *Square Feet per Perforation*. Recommended value is 4-11 ft² per perforation.
Does not apply to At-Grades

a. *Bed Area* = Bed Width (ft) X Bed Length (ft)

$$\boxed{10} \text{ ft} \times \boxed{60} \text{ ft} = \boxed{600} \text{ ft}^2$$

b. *Square Foot per Perforation* = *Bed Area* divided by the *Total Number of Perforations*.

$$\boxed{600} \text{ ft}^2 \div \boxed{60} \text{ perforations} = \boxed{10.0} \text{ ft}^2/\text{perforations}$$

13. Select *Minimum Average Head*: $\boxed{1.0}$ ft

14. Select *Perforation Discharge* (GPM) based on Table: $\boxed{0.41}$ GPM per Perforation

15. Determine required *Flow Rate* by multiplying the *Total Number of Perfs.* by the *Perforation Discharge*.

$$\boxed{60} \text{ Perfs} \times \boxed{0.41} \text{ GPM per Perforation} = \boxed{25} \text{ GPM}$$

16. *Volume of Liquid Per Foot of Distribution Piping* (Table II): $\boxed{0.110}$ Gallons/ft

17. *Volume of Distribution Piping* =

= [Number of Perforated Laterals X Length of Laterals X (Volume of Liquid Per Foot of Distribution Piping)]

$$\boxed{3} \times \boxed{58} \text{ ft} \times \boxed{0.110} \text{ gal/ft} = \boxed{19.1} \text{ Gallons}$$

18. Minimum Delivered Volume = Volume of Distribution Piping X 4

$$\boxed{19.1} \text{ gals} \times 4 = \boxed{76.6} \text{ Gallons}$$

Table II Volume of Liquid in Pipe	
Pipe Diameter (inches)	Liquid Per Foot (Gallons)
1	0.045
1.25	0.078
1.5	0.110
2	0.170
3	0.380
4	0.661

Comments/Special Design Considerations:

Distribution Network for each Mound

1. PUMP CAPACITY Project ID: _____ v 04.02.2019

Pumping to Gravity or Pressure Distribution:

- If pumping to gravity enter the gallon per minute of the pump: GPM (10 - 45 gpm)
- If pumping to a pressurized distribution system: GPM
- Enter pump description:

2. HEAD REQUIREMENTS

- Elevation Difference ft between pump and point of discharge:
- Distribution Head Loss: ft
- Additional Head Loss: ft (due to special equipment, etc.)

Distribution Head Loss	
Gravity Distribution = 0ft	
Pressure Distribution based on Minimum Average Head Value on Pressure Distribution Worksheet:	
Minimum Average Head	Distribution Head Loss
1ft	5ft
2ft	6ft
5ft	10ft

Table I. Friction Loss in Plastic Pipe per 100ft

Flow Rate (GPM)	Pipe Diameter (inches)			
	1	1.25	1.5	2
10	9.1	3.1	1.3	0.3
12	12.8	4.3	1.8	0.4
14	17.0	5.7	2.4	0.6
16	21.8	7.3	3.0	0.7
18		9.1	3.8	0.9
20		11.1	4.6	1.1
25		16.8	6.9	1.7
30		23.5	9.7	2.4
35			12.9	3.2
40			16.5	4.1
45			20.5	5.0
50				6.1
55				7.3
60				8.6
65				10.0
70				11.4
75				13.0
85				16.4
95				20.1

- Supply Pipe Diameter: in
 - Supply Pipe Length: ft
- E. Friction Loss in Plastic Pipe per 100ft from Table I:
 Friction Loss = ft per 100ft of pipe
- F. Determine *Equivalent Pipe Length* from pump discharge to soil dispersal area discharge point. Estimate by adding 25% to supply pipe length for fitting loss. $Supply\ Pipe\ Length\ (D.2) \times 1.25 = Equivalent\ Pipe\ Length$

ft X 1.25 = ft

G. Calculate *Supply Friction Loss* by multiplying *Friction Loss Per 100ft* (Line E) by the *Equivalent Pipe Length* (Line F) and divide by 100.

Supply Friction Loss = ft per 100ft X ft ÷ 100 = ft

H. *Total Head* requirement is the sum of the *Elevation Difference* (Line A), the *Distribution Head Loss* (Line B), *Additional Head Loss* (Line C), and the *Supply Friction Loss* (Line G)

ft + ft + ft + ft = ft

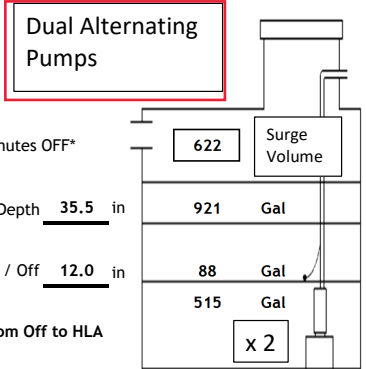

3. PUMP SELECTION

A pump must be selected to deliver at least **25.0** GPM (Line 1 or Line 2) with at least **16.0** feet of total head.

Comments:

Pump calculations for each mound and supply line. Dual Alternating Pumps required.

DETERMINE TANK CAPACITY AND DIMENSIONS		Project ID:	v 04.02.2019																
1.	A. Design Flow (Design Sum.1A):	<input type="text" value="1440"/> GPD	B. Tank Use: <input type="text" value="Dosing"/>																
	C. 70% of Design Flow	<input type="text" value="1008"/> Gal																	
	D. Min. required pump tank capacity:	<input type="text" value="2000"/> Gal	E. Recommended capacity: <input type="text" value="2000"/> Gal																
2.	A. Tank Manufacturer:	<input type="text" value="Wieser Precast"/>	B. Tank Model: <input type="text" value="W2000-MR"/>																
	C. Capacity from manufacturer:	<input type="text" value="2146"/> Gallons	Note: Design calculations are based on this specific tank. Substituting a different tank model will change the pump float or timer settings. Contact designer if changes are necessary.																
	D. Gallons per inch:	<input type="text" value="42.9"/> Gallons per inch																	
	E. Liquid depth of tank from manufacturer:	<input type="text" value="53.0"/> inches																	
DETERMINE DOSING VOLUME																			
3 Calculate Volume to Cover Pump (The inlet of pump should be 4 in from the bottom of the tank & 2 inches of water covering the pump is recommended) (Pump and block height + 2 inches) X Gallons Per Inch (2D) (<input type="text" value="10"/> in + 2 inches) X <input type="text" value="42.9"/> Gallons Per Inch = <input type="text" value="515"/> Gallons																			
4 Minimum Delivered Volume = 4 X Volume of Distribution Piping: -Item 18 of the Pressure Distribution or Item 11 of Non-level <input type="text" value="77"/> Gallons (minimum dose) <input type="text" value="1.8"/> inches/dose																			
5 Calculate Maximum Pumpout Volume (25% of Design Flow) Design Flow: <input type="text" value="1440"/> GPD X 0.25 = <input type="text" value="360"/> Gallons (maximum dose) <input type="text" value="8.4"/> inches/dose																			
6 Select a pumpout volume that meets both Minimum and Maximum: <input type="text" value="80"/> Gallons																			
7 Calculate Doses Per Day = Design Flow X 70% ÷ Delivered Volume <input type="text" value="1008"/> gpd ÷ <input type="text" value="80"/> gal = <input type="text" value="8.8"/> Doses																			
8 Calculate Drainback:																			
A. Diameter of Supply Pipe = <input type="text" value="2"/> inches																			
B. Length of Supply Pipe = <input type="text" value="45"/> feet																			
C. Volume of Liquid Per Lineal Foot of Pipe = <input type="text" value="0.170"/> Gallons/ft																			
D. Drainback = Length of Supply Pipe X Volume of Liquid Per Lineal Foot of Pipe <input type="text" value="45"/> ft X <input type="text" value="0.170"/> gal/ft = <input type="text" value="7.7"/> Gallons																			
9. Total Dosing Volume = Delivered Volume plus Drainback <input type="text" value="80"/> gal + <input type="text" value="7.7"/> gal = <input type="text" value="88"/> Gallons																			
10. Minimum Alarm Volume = Depth of alarm (2 or 3 inches) X gallons per inch of tank <input type="text" value="3"/> in X <input type="text" value="42.9"/> gal/in = <input type="text" value="128.8"/> Gallons																			
		<table border="1" style="margin: auto;"> <thead> <tr> <th colspan="2">Volume of Liquid in Pipe</th> </tr> <tr> <th>Pipe Diameter (inches)</th> <th>Liquid Per Foot (Gallons)</th> </tr> </thead> <tbody> <tr><td>1</td><td>0.045</td></tr> <tr><td>1.25</td><td>0.078</td></tr> <tr><td>1.5</td><td>0.110</td></tr> <tr><td>2</td><td>0.170</td></tr> <tr><td>3</td><td>0.380</td></tr> <tr><td>4</td><td>0.661</td></tr> </tbody> </table>		Volume of Liquid in Pipe		Pipe Diameter (inches)	Liquid Per Foot (Gallons)	1	0.045	1.25	0.078	1.5	0.110	2	0.170	3	0.380	4	0.661
Volume of Liquid in Pipe																			
Pipe Diameter (inches)	Liquid Per Foot (Gallons)																		
1	0.045																		
1.25	0.078																		
1.5	0.110																		
2	0.170																		
3	0.380																		
4	0.661																		
TIMER FLOAT SETTINGS*																			
11. Required Flow Rate :																			
A. From Pump Curve - Must be Validated after Installation: <input type="text" value="40"/> GPM																			
B. Calculated GPM = Change in Depth (in) x Gallons Per Inch / Time Interval in Minutes <input type="text" value="3"/> in X <input type="text" value="42.9"/> gal/in ÷ <input type="text" value="10"/> min = <input type="text" value="12.87"/> GPM																			
*Note: This value must be adjusted after installation based on pump calibration.																			
12. Select Flow Rate from Line 11.A or 11.B above: <input type="text" value="40.0"/> GPM*																			
13. Calculate TIMER ON setting: Total Dosing Volume x GPM <input type="text" value="88"/> gal x <input type="text" value="40.0"/> gpm = <input type="text" value="2.2"/> Minutes ON*																			
14. Calculate TIMER OFF setting: Minutes Per Day (1440)/Doses Per Day - Minutes On 1440 min ÷ <input type="text" value="9"/> doses/day - <input type="text" value="2.2"/> min = <input type="text" value="161.1"/> Minutes OFF*																			
15. Pump Off Float - Measuring from bottom of tank: Distance to set Pump Off Float=Gallons to Cover Pump / Gallons Per Inch: <input type="text" value="515"/> gal ÷ <input type="text" value="42.9"/> gal/in = <input type="text" value="12.0"/> Inches Alarm Depth <u>35.5</u> in																			
16. Alarm Float - Measuring from bottom of tank (90% recommended): Distance to set Alarm Float = Tank Depth X % of Tank Depth (0.9 recommended) <input type="text" value="53.0"/> in X <input type="text" value="0.67"/> = <input type="text" value="35.5"/> in Timer On / Off <u>12.0</u> in <input type="text" value="1009.05"/> gallons from Off to HLA																			

Include Dual Alternating Pumps

Septic System Management Plan for Below Grade Systems

The goal of a septic system is to protect human health and the environment by properly treating wastewater before returning it to the environment. Your septic system is designed to kill harmful organisms and remove pollutants before the water is recycled back into our lakes, streams and groundwater.

This **management plan** will identify the operation and maintenance activities necessary to ensure long-term performance of your septic system. Some of these activities must be performed by you, the owner. Other tasks must be performed by a licensed septic maintainer or service provider. However, it is **YOUR** responsibility to make sure all tasks get accomplished in a timely manner.

The University of Minnesota's *Septic System Owner's Guide* contains additional tips and recommendations designed to extend the effective life of your system and save you money over time.

Proper septic system design, installation, operation and maintenance means safe and clean water!

Property Owner **Stillwater Area Public Schools - ISD 834** Email **willgert@stillwaterschools.org**

Property Address **11530 Hudson Blvd N, Lake Elmo, MN 55042** Property ID **36.029.21.43.0004**

System Designer **Kloepfner Services & Designs, LLC** Contact Info **763-843-4114**

System Installer Contact Info

Service Provider/Maintainer Contact Info

Permitting Authority **Washington County - Public Health & Environment** Contact Info **651-430-6655**

Permit # Date Inspected

Keep this Management Plan with your Septic System Owner's Guide. The Septic System Owner's Guide includes a folder to hold maintenance records including pumping, inspection and evaluation reports. Ask your septic professional to also:

- Attach permit information, designer drawings and as-built of your system, if they are available.
- Keep copies of all pumping records and other maintenance and repair invoices with this document.
- Review this document with your maintenance professional at each visit; discuss any changes in product use, activities, or water-use appliances.

For a copy of the *Septic System Owner's Guide*, visit www.bookstores.umn.edu and search for the word "septic" or call 800-322-8642.

For more information see <http://septic.umn.edu>

Owner Management Tasks

These *operation and maintenance* activities are your responsibility. *Chart on page 6 can help track your activities.*

Your toilet is not a garbage can. Do not flush anything besides human waste and toilet paper. No wet wipes, cigarette butts, disposal diapers, used medicine, feminine products or other trash!

The system and septic tanks needs to be
checked every 12 months

Your service provider or pumper/maintainer should evaluate if your tank needs to be pumped more or less often.

Seasonally or several times per year

- *Leaks.* Check (listen, look) for leaks in toilets and dripping faucets. Repair leaks promptly.
- *Soil treatment area.* Regularly check for wet or spongy soil around your soil treatment area. If surfaced sewage or strong odors are not corrected by pumping the tank or fixing broken caps and leaks, call your service professional. *Untreated sewage may make humans and animals sick.* Keep bikes, snowmobiles and other traffic off and control borrowing animals.
- *Alarms.* Alarms signal when there is a problem; contact your service professional any time the alarm signals.
- *Lint filter.* If you have a lint filter, check for lint buildup and clean when necessary. If you do not have one, consider adding one after washing machine.
- *Effluent screen.* If you do not have one, consider having one installed the next time the tank is cleaned along with an alarm.

Annually

- *Water usage rate.* A water meter or another device can be used to monitor your average daily water use. Compare your water usage rate to the design flow of your system (listed on the next page). Contact your septic professional if your average daily flow over the course of a month exceeds 70% of the design flow for your system.
- *Caps.* Make sure that all caps and lids are intact and in place. Inspect for damaged caps at least every fall. Fix or replace damaged caps before winter to help prevent freezing issues.
- *Water conditioning devices.* See Page 5 for a list of devices. When possible, program the recharge frequency based on *water demand (gallons)* rather than *time (days)*. Recharging too frequently may negatively impact your septic system. Consider updating to demand operation if your system currently uses time,
- *Review your water usage rate.* Review the Water Use Appliance chart on Page 5. Discuss any major changes with your service provider or pumper/maintainer.

During each visit by a service provider or pumper/maintainer

- Make sure that your service professional services the tank through the manhole. (NOT through a 4" or 6" diameter inspection port.)
- Ask how full your tank was with sludge and scum to determine if your service interval is appropriate.
- Ask your pumper/maintainer to accomplish the tasks listed on the Professional Tasks on Page 4.

Professional Management Tasks

These are the operation and maintenance activities that a pumper/maintainer performs to help ensure long-term performance of your system. At each visit a written report/record must be provided to owner.

Plumbing/Source of Wastewater

- Review the Water Use Appliance Chart on Page 5 with owner. Discuss any changes in water use and the impact those changes may have on the septic system.
- Review water usage rates (if available) with owner.

Septic Tank/Pump Tanks

- *Manhole lid.* A riser is recommended if the lid is not accessible from the ground surface. Insulate the riser cover for frost protection.
- *Liquid level.* Check to make sure the tank is not leaking. The liquid level should be level with the bottom of the outlet pipe. (If the water level is below the bottom of the outlet pipe, the tank may not be watertight. If the water level is higher than the bottom of the outlet pipe of the tank, the effluent screen may need cleaning, or there may be ponding in the soil treatment area.)
- *Inspection pipes.* Replace damaged or missing pipes and caps.
- *Baffles.* Check to make sure they are in place and attached, and that inlet/outlet baffles are clear of buildup or obstructions.
- *Effluent screen.* Check to make sure it is in place; clean per manufacturer recommendation. Recommend retrofitted installation if one is not present.
- *Alarm.* Verify that the alarm works.
- *Scum and sludge.* Measure scum and sludge in each compartment of each septic and pump tank, pump if needed.

Pump

- *Pump and controls.* Check to make sure the pump and controls are operating correctly.
- *Pump vault.* Check to make sure it is in place; clean per manufacturer recommendations.
- *Alarm.* Verify that the alarm works.
- *Drainback.* Check to make sure it is draining properly.
- *Event counter or elapsed time meter.* Check to see if there is an event counter or elapsed time meter for the pump. If there is one or both, calculate the water usage rate and compare to the anticipated use listed on Design and Page 2. Dose Volume: 80 gallons: Pump run time: 3.25 Minutes

Soil Treatment Area

- *Inspection pipes.* Check to make sure they are properly capped. Replace caps and pipes that are damaged.
- *Surfacing of effluent.* Check for surfacing effluent or other signs of problems.
- *Lateral flushing.* Check lateral distribution; if cleanouts exist, flush and clean at recommended frequency.
- *Vegetation* - Check to see that a good growth of vegetation is covering the system.

All other components – evaluate as listed here:

**Water-Use Appliances and
Equipment in the Building**

Appliance	Impacts on System	Management Tips
Garbage disposal	<ul style="list-style-type: none"> • Uses additional water. • Adds solids to the tank. • Finely-ground solids may not settle. Unsettled solids can exit the tank and enter the soil treatment area. 	<ul style="list-style-type: none"> • Use of a garbage disposal is not recommended. • Minimize garbage disposal use. Compost instead. • To prevent solids from exiting the tank, have your tank pumped more frequently. • Add an effluent screen to your tank.
Washing machine	<ul style="list-style-type: none"> • Washing several loads on one day uses a lot of water and may overload your system. • Overloading your system may prevent solids from settling out in the tank. Unsettled solids can exit the tank and enter the soil treatment area. 	<ul style="list-style-type: none"> • Choose a front-loader or water-saving top-loader, these units use less water than older models. • Limit the addition of extra solids to your tank by using liquid or easily biodegradable detergents. Limit use of bleach-based detergents and fabric softeners. • Install a lint filter after the washer and an effluent screen to your tank • Wash only full loads and think even – spread your laundry loads throughout the week.
Dishwasher	<ul style="list-style-type: none"> • Powdered and/or high-phosphorus detergents can negatively impact the performance of your tank and soil treatment area. • New models promote “no scraping”. They have a garbage disposal inside. 	<ul style="list-style-type: none"> • Use gel detergents. Powdered detergents may add solids to the tank. • Use detergents that are low or no-phosphorus. • Wash only full loads. • Scrape your dishes anyways to keep undigested solids out of your septic system.
Grinder pump (in building)	<ul style="list-style-type: none"> • Finely-ground solids may not settle. Unsettled solids can exit the tank and enter the soil treatment area. 	<ul style="list-style-type: none"> • Expand septic tank capacity by a factor of 1.5. • Include pump monitoring in your maintenance schedule to ensure that it is working properly. • Add an effluent screen.
Large bathtub (whirlpool)	<ul style="list-style-type: none"> • Large volume of water may overload your system. • Heavy use of bath oils and soaps can impact biological activity in your tank and soil treatment area. 	<ul style="list-style-type: none"> • Avoid using other water use appliances at the same time. For example, don't wash clothes and take a bath at the same time. • Use oils, soaps, and cleaners in the bath or shower sparingly.
Clean Water Uses	Impacts on System	Management Tips
High-efficiency furnace	<ul style="list-style-type: none"> • Drip may result in frozen pipes during cold weather. 	<ul style="list-style-type: none"> • Re-route water directly out of the house. Do not route furnace discharge to your septic system.
Water softener Iron filter Reverse osmosis	<ul style="list-style-type: none"> • Salt in recharge water may affect system performance. • Recharge water may hydraulically overload the system. 	<ul style="list-style-type: none"> • These sources produce water that is not sewage and should not go into your septic system. • Reroute water from these sources to another outlet, such as a dry well, draitile or old drainfield.
Surface drainage Footing drains	<ul style="list-style-type: none"> • Water from these sources will overload the system and is prohibited from entering septic system. 	<ul style="list-style-type: none"> • When replacing, consider using a demand-based recharge vs. a time-based recharge. • Check valves to ensure proper operation; have unit serviced per manufacturer directions

Owner Maintenance Log

Track maintenance activities here for easy reference. See list of management tasks on pages 3 and 4.

Activity	Date accomplished									
Check frequently:										
Leaks: check for plumbing leaks*										
Soil treatment area check for surfacing**										
Lint filter: check, clean if needed*										
Effluent screen (if owner-maintained)***										
Alarm**										
Check annually:										
Water usage rate (maximum gpd _____)										
Caps: inspect, replace if needed										
Water use appliances – review use										
Other:										

- *Monthly
- **Quarterly
- ***Bi-Annually

Notes:

"As the owner of this SSTS, I understand it is my responsibility to properly operate and maintain the sewage treatment system on this property, utilizing the Management Plan. If requirements in this Management Plan are not met, I will promptly notify the permitting authority and take necessary corrective actions. If I have a new system, I agree to adequately protect the reserve area for future use as a soil treatment system."

SYMBOL LEGEND

-  REMOVE AND DISPOSE OF EXISTING BITUMINOUS PAVEMENT SECTION
-  REMOVE AND DISPOSE OF EXISTING CONCRETE PAVEMENT SECTION
-  REMOVE AND SALVAGE EXISTING GRAVEL SECTION FOR REUSE. DISPOSE OF ALL EXCESS MATERIALS.

KEY NOTES

- ① REMOVE AND DISPOSE OF EXISTING CONCRETE CURB AND GUTTER.
- ② REMOVE AND DISPOSE OF EXISTING CHAIN LINK FENCE FABRIC, POSTS, AND FOOTINGS.
- ③ REMOVE AND DISPOSE OF EXISTING CONCRETE PAVEMENT SECTION.
- ④ SAWCUT, REMOVE, AND DISPOSE OF EXISTING BITUMINOUS PAVEMENT SECTION.
- ⑤ REMOVE AND DISPOSE OF EXISTING STORM SEWER.
- ⑥ REMOVE AND DISPOSE EXISTING CONCRETE BOLLARDS.
- ⑦ PROTECT EXISTING ELECTRICAL TRANSFORMER DURING CONSTRUCTION.
- ⑧ PROTECT WELL DURING CONSTRUCTION UNTIL NEW WATER SERVICE CONNECTION IS INSTALLED AND OPERATIONAL. WELL TO BE ABANDONED AFTER WATER SERVICE INSTALLATION.
- ⑨ PROTECT EXISTING SEPTIC SYSTEM TANKS AND DRAINFIELD DURING CONSTRUCTION. ABANDON AND DISPOSE OF ALL COMPONENTS AND ASSOCIATED SOILS PER WASHINGTON COUNTY REQUIREMENTS, AFTER SANITARY SERVICE CONNECTION IS OPERATIONAL.
- ⑩ REMOVE AND DISPOSE EXISTING TREES, STUMPS AND ROOTS.
- ⑪ TREES TO BE REMOVED BY CONTRACTOR FOR FOUR CORNERS STREET & UTILITIES IMPROVEMENTS.
- ⑫ PROTECT EXISTING BOULDER RETAINING WALL DURING CONSTRUCTION.

DEMOLITION NOTES

1. Verify all existing utility locations.
2. It is the responsibility of the Contractor to perform or coordinate all necessary utility demolitions and relocations from existing utility locations to all onsite amenities and buildings. These connections include, but are not limited to, water, sanitary sewer, cable tv, telephone, gas, electric, site lighting, etc.
3. Prior to beginning work, contact Gopher State OneCall (651-454-0002) to locate utilities throughout the area under construction. The Contractor shall retain the services of a private utility locator to locate the private utilities.
4. Sawcut along edges of pavements, sidewalks, and curbs to remain.
5. All construction shall be performed in accordance with state and local standard specifications for construction.
6. Coordinate with Four Corners Plans for any work outside of the property within the road Right-Of-Way.
7. Protect all trees that are to remain during all construction.

LOT SIZE

Total Lot Size: 478,997 s.f. = 11.00 Acres

Breakdown:
 Existing Building: 15,498 s.f. = 3.23%
 Existing Gravel Surfaced Pavement Areas: 91,861 s.f. = 19.18%
 Existing Concrete and Bituminous Pavement: 9,022 s.f. = 1.88%
 Existing Open Space: 362,616 s.f. = 75.71%

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Washington County, Minnesota
 Survey Area Data: Version 15, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 1, 2013—Sep 13, 2016

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
49	Antigo silt loam, 0 to 2 percent slopes	2.0	78.4%
367B	Crystal Lake silt loam, 1 to 6 percent slopes	0.6	21.6%
Totals for Area of Interest		2.6	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

Washington County, Minnesota

49—Antigo silt loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2tnz7
Elevation: 690 to 1,900 feet
Mean annual precipitation: 27 to 36 inches
Mean annual air temperature: 37 to 46 degrees F
Frost-free period: 80 to 150 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Antigo and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Antigo

Setting

Landform: Flats, terraces
Landform position (three-dimensional): Tread, rise
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Parent material: Loess and/or silty glaciofluvial deposits over loamy glaciofluvial deposits over stratified sandy and gravelly outwash

Typical profile

Ap - 0 to 9 inches: silt loam
E - 9 to 12 inches: silt loam
B/E - 12 to 19 inches: silt loam
Bt1 - 19 to 28 inches: silt loam
2Bt2 - 28 to 31 inches: loam
2Bt3 - 31 to 33 inches: very gravelly sandy loam
3C - 33 to 79 inches: stratified sand to very gravelly coarse sand

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Moderate (about 7.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2s
Hydrologic Soil Group: B
Forage suitability group: Mod AWC, adequately drained (G090BY005WI)

Custom Soil Resource Report

Other vegetative classification: Acer saccharum/Hydrophyllum (AH), Acer saccharum/Viola-Osmorhiza (AViO)
Hydric soil rating: No

Minor Components

Billyboy

Percent of map unit: 8 percent
Landform: Terraces, flats
Landform position (three-dimensional): Tread, rise
Down-slope shape: Linear
Across-slope shape: Linear
Other vegetative classification: Acer saccharum/Hydrophyllum (AH), Acer saccharum/Viola-Osmorhiza (AViO), Acer saccharum-Tsuga/Maianthemum (ATM), Acer saccharum/Caulophyllum-Circaea (ACaCi)
Hydric soil rating: No

Sconsin

Percent of map unit: 5 percent
Landform: Flats, terraces
Landform position (three-dimensional): Tread, rise
Down-slope shape: Linear
Across-slope shape: Linear
Other vegetative classification: Acer saccharum/Hydrophyllum (AH), Acer saccharum/Viola-Osmorhiza (AViO), Acer saccharum-Tsuga/Maianthemum (ATM), Acer saccharum/Caulophyllum-Circaea (ACaCi)
Hydric soil rating: No

Rosholt

Percent of map unit: 3 percent
Landform: Flats, terraces
Landform position (three-dimensional): Tread, rise
Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Other vegetative classification: Acer saccharum/Athyrium (AAt), Acer saccharum/Caulophyllum-Circaea (ACaCi), Acer saccharum/Vaccinium-Desmodium (AVDe), Acer saccharum-Quercus/Viburnum=(Vaccinium) (AQVb-V)
Hydric soil rating: No

Brill

Percent of map unit: 2 percent
Landform: Terraces, flats
Landform position (three-dimensional): Tread, rise
Down-slope shape: Linear
Across-slope shape: Linear
Other vegetative classification: Acer saccharum/Athyrium (AAt), Acer saccharum/Caulophyllum-Circaea (ACaCi)
Hydric soil rating: No

Ossmer

Percent of map unit: 2 percent
Landform: Flats, terraces
Landform position (three-dimensional): Tread, talf
Down-slope shape: Linear, concave
Across-slope shape: Linear
